

Our research has provided us with a solution to a problem that has gone unaddressed.

Existing pull cords are a nylon material and allow organisms to permeate deep within its own fibers.

Sometimes the solutions are surprisingly simple. A strong disinfectant can kill organisms on a surface. Our pull cord is available in original PVC or new LDPE material which can be cleaned with normal anti-microbial solutions.

Our pull cord can be cleaned repeatedly and retain its original strength of the existing nylon cord. Replacing these cords will improve the cleanliness of your toilet and shower rooms and the safety of your patients and staff.

Phone: 800-485-8752 • Email: Info@irais.com

A proactive, rather than precautionary approach to infection control, can reduce the risk of transmission by micro-organisms.

We already use protective equipment i.e. gloves, goggles, masks, and gowns. Why haven't we addressed an area subject to major repetitive usage?

Our cleanable cords can be adapted to all manufactures toilet and shower stations, as well as over bed lighting.

We believe we are offering a sustainable solution to a potential problem involving many bodily fluid secretions.

*** No special tools required for any of our products!**

*** 1 year warranty on all items**

ABOUT IRais

Our pull cord system will help improve the problem pull cords in hospitals and nursing homes by making the cord cleanable.

Our experience in the Healthcare Industry has been ongoing for the past 30 years. We are a source for great innovations in Healthcare.
